Brand New Book ***** Print on Demand *****.Excerpt from **The Transportation of Gases, Liquids and Solids by Means of Steam, Compressed Air and Pressure Water: A Complete Description of the Theory, Construction, Operation and Application of Jet Machines, Spray Nozzles, Etc;**, For Chemical, Metallurgical, Mining, Mechanical and Civil Engineers Though the application of steam, compressed air and pressure water for transportation purposes has been steadily increasing for the last twenty-five years, there is, as yet, no book on the market covering the description of these machines. Since the present book is the first on this important subject, I hope that it will be welcome to chemical, metallurgical, mining, mechanical and also civil engineers. Up to this time the information regarding these appliances was widely scattered in engineering journals, various books on applied mechanics, text-books on thermodynamics and in manufacturers catalogues. I have described in every chapter the construction, theory, operation and application of each apparatus, and have also inserted the necessary tables of dimensions and capacities. The first part of the book deals with the transportation of gases, the second with the transportation of liquids, the third with the transportation of solids. In the fourth part the appliances for atomizing liquids are described, while the fifth contains a discussion of jet condensers. The intimate relation of the fourth and fifth parts will be readily understood from the respective descriptions. The sixth part deals with the theory of the jet machines. Although the book is intended for the industrial engineer, it is of equal value as a text-book, since it gives also the fundamental principles, besides the latest experimental data and applications. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic...
