Excerpt: . . . 10 9 availability. Other analyses, e. g. , Corson and Nicholson, have extended the data period back as far as 1971. Even if 1979 is the earliest possible start date, there is no apparent reason for not extending the estimation period through 1993. Since the authors subsequently undertake simulations for the 1971-1993 period, it would seem they have most if not all of the requisite variables to estimate for the full twenty-three years. It would be sensible to test for the sensitivity of coefficients to choice of estimation period, particularly to note changes in the size and significance of the coefficients on the welfare variables. 2 ) The use of the IUTU ratio as the dependent variable follows the practice of many previous investigations. A unique feature of this study, however, is the heavy reliance placed on financial motivations for state actions. The IUTU ratio includes many weeks claimed for which no benefits were actually paid ( about 10 percent of 10 total weeks claimed ). Closer in concept to the cost variable motivating state behavior under the cost shifting hypothesis would be the ratio of the weekly number of beneficiaries to total 11 unemployment. The authors could have investigated the sensitivity of the findings using this alternative formulation of the dependent variable. 3 ) The welfare variable that yielded the strongest empirical results was per capita Food Stamp expenditures. This is the product of average benefits per recipient ( measured in current dollars ) and recipients as a proportion...
