

Report to the Director of Public Service, Akron, Ohio, on Sewage Treatment and Trade Wastes (Paperback)

By Akron Sewage Testing Station

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1912 Excerpt: . in the case of the former, sludge is removed from the tank as soon as fermentation develops, while, in the latter, sludge is removed only at long intervals. Period of Flow The capacity of the tank studied at the testing station was 3,032 gallons. Under conditions which prevailed during the tests, the rate of application of sewage afforded a period of flow of 7.4 hours. No allowance was made for the volume occupied by the sludge in computing the period of flow. The total volume of sewage which passed through the septic tank was 2,170,000 gallons. Average Results of Analyses In Table No. 11 are shown average results of analyses of the effluent from the septic tank. Results of the individual analyses are contained in the appendices. It will be noted that the organic nitrogen was reduced 23.6 per cent., and the carbonaceous organic matter...
